Research papers

A macro-scale and semi-distributed monthly water balance model to predict climate change impacts in China
Shenglian Guo, Jinxing Wang, Lihua Xiong, Aiwen Ying and Dingfang Li 1
Bayesian system for probabilistic river stage forecasting
Roman Krzysztofowicz 16
Probabilistic flood forecast: bounds and approximations
Roman Krzysztofowicz 41
Analysis of topographic and climatic control on rainfall-triggered shallow landsliding using a quasi-dynamic wetness index
Marco Borga, Giancarlo Dalla Fontana and Federico Cazorzi 56
Combining a fuzzy optimal model with a genetic algorithm to solve multi-objective rainfall–runoff model calibration
C.T. Cheng, C.P. Ou and K.W. Chau 72
Evaluation of 1D and 2D numerical models for predicting river flood inundation
M.S. Horritt and P.D. Bates 87
Trends and fluctuations in the dates of ice break-up of lakes and rivers in Northern Europe: the effect of the North Atlantic Oscillation
JaeChan Yoo and Paolo D'Odorico 100
Combining regional approach and data extension procedure for assessing GEV distribution of extreme precipitation in Belgium
Daniel Gellens. 113
Development and application of a 1D floodplain sedimentation model for the River Rhine in The Netherlands
Nathalie E.M. Asselman and Marjolein van Wijngaarden 127
A comparison of published experimental data with a coupled lattice Boltzmann-analytic advection–diffusion method for reactive transport in porous media
G.S. O'Brien, C.J. Bean and F. McDermott 143
Micro-scale spatial variability and the timing of snow melt runoff in a high mountain catchment
S.P. Anderton, S.M. White and B. Alvera. 158
The method of self-determined probability weighted moments revisited
Timothy M. Whalen, Gregory T. Savage and Garrett D. Jeong 177
Determining the sources of stormflow from the fluorescence properties of dissolved organic carbon in a forested headwater catchment
Masanori Katsuyama and Nobuhito Ohte 192
Matrix diffusion in northern Negev fractured chalk and its correlation to porosity
Amir Polak, Ronit Nativ and Rony Wallach 203
Numerical simulation of unsaturated flow along preferential pathways: implications for the use of mass balance calculations for isotope storm hydrograph separation
S.J. Van der Hoven, D.K. Solomon and G.R. Moline 214
Tidal groundwater level fluctuations in L-shaped leaky coastal aquifer system
Hailong Li and Jiu Jimmy Jiao. 234
The use of indices of flow variability in assessing the hydrological and instream habitat impacts of upland afforestation and drainage
David Archer and Malcolm Newson. 244
Analysis of water movement in paddy rice fields (II) simulation studies
Shih-Kai Chen, Chen Wuing Liu and Han-Chen Huang. 259

PII: S0022-1694(02)00302-5
